

1. Can we overload a function with the help of different return type & same parameter list?
2. Which feature of C# is depicted in the following image?

3. Which feature of C# is depicted in the following image?

4. Write a program to overload the “ - ” operator. For string type variables it will check whether two strings are equal or not, and for the rest of the cases it will return the result of subtraction.
5. Write a program to input a 3D array. And check whether an item is in that array. If it does then return its' position in the array, otherwise show that “it's not in the array”.
